

Some queries for reviewers of Chapter 7

1. If you were to cite one or two specific textbooks that you find the most useful on the general topic of data analysis relevant to physical oceanography, which would you suggest? (We will include such citations, since the coverage here is necessarily very limited.)
2. What topics of general use, great relevance are missing?
3. What topics are outdated without caveats that indicate that we know that they are outdated (hence included mainly for historical interest)?
4. What imbalances in coverage do you find (topics covered in far too much detail at the expense of others that are of equal importance and hardly covered at all)?
5. Most important of all, please help us find anything that is inaccurate, erroneous, misinterpreted, or possibly subject to misinterpretation.

Thank you!
